

Former Service Station Tank Removal and Remediation in Long Branch, NY

May 2017

Long Branch, NJ – Former service station

Highground Industrial, LLC was contracted by the property owner to perform UST removals and remediation activities during the 2nd quarter of 2017.

One 500-gallon heating oil tank, and four 3,000-gallon abandoned gasoline tanks, that were previously filled with sand, were removed from the site.

Significant contamination was encountered during the UST removals. Approximately 475 tons of contaminated soils were excavated and transported to an approved disposal facility.

Due to the high groundwater table, a vacuum truck was used to dewater the excavation. A total of approximately 3,500 gallons of impacted water was properly disposed of at a licensed facility.

Upon completion, the entire area was backfilled to grade.

The entire project was completed in two phases over seven days of field work. The total value of the project was approximately \$87,000.00.
